

Impact Factor and Unofficial Impact Calculation Information

2009 Impact Factors

The following titles published by Co-Action Publishing are tracked by Thomson Reuter's Science Citation Index or Social Science Index and have received an impact factor or are awaiting a first impact factor:

Journal	2009 Impact Factor
Polar Research	0.909
Libyan Journal of Medicine	Now included, awaiting impact factor
International Journal of Qualitative Studies in Health and Well-being	Now included, awaiting impact factor

2010 Unofficial Impact Calculations

For those journals that have not yet received an impact factor, or that are awaiting a decision on an application for coverage in the Science Citation Database, Co-Action Publishing has calculated an unofficial impact calculation based on data retrieved from Google Scholar.

Journal	2010 Unofficial Impact Calculation
Ethics & Global Politics	0.481
Food & Nutrition Research	2.708
Global Health Action	1.910
Medical Education Online	0.879

The unofficial impact calculation has been calculated in the following way:

- 1) A search was conducted for each article published in the Journal during 2008 and 2009.
- 2) The resulting citation list for each article was then cleaned to identify only those citations that were made in 2010.
- 3) Because Google Scholar is more encompassing than the Science Citation Database, and captures citations also by books, national reports, etc. the resulting 2010 citation list was further cleaned such that it contained only citations made in peer reviewed journals.
- 4) The unofficial impact factor was then calculated by dividing the total number of citations made in 2010 to articles published in 2008 and 2009 by the total number of citable items.

Journals without Impact Factors or Unofficial Impact Calculations

The remainder of the titles published by Co-Action Publishing began publishing content after 2008, and as such three years of data are not yet available to allow calculations.
